

Mouse Anti-Human Programmed Death Ligand-1 Monoclonal Antibody Datasheet

Product Name: mAb anti-Human PDL-1

Clone No.: 10B12

Catalogue No.: MO-L40044S

Quantity: 0.5 mg/vial

Description: Mouse monoclonal antibody (mAb) to human programmed death ligand-1 (PDL-1), or mouse mAb to B7H1, or mouse mAb to human CD274.

Purification: Protein G affinity purified

Product Type: Primary antibody

Target Protein: Human programmed death ligand-1 (PD-1), also known as B7H1 or CD274.

Immunogen: Human cell expressed recombinant PDL-1 (Phe19-Arg238) with poly-histidine tag at C-terminus.

Fusion Myeloma: Sp2/O-Ag14

Specificity: Reactive with human programmed death ligand-1 (PDL-1).

Species Reactivity: Human, others not tested.

Host / Isotype: Mouse, IgG1 Kappa

Formulation: Lyophilized from a solution in 0.01M PBS, pH 7.2

Reconstitution: Double distilled water is recommended to adjust the final concentration to 1.00mg/mL.

Storage: Store at -20 °C. Avoid repeated freeze/thaw cycles after reconstitution.

Research Area: Immunosuppression. Cancer immunotherapy.

Background: Programmed Death Ligand-1 (PDL-1) is a

40KD transmembrane protein that can link with immune checkpoint protein Programmed Death-1 (PD-1) when T-cell receptors engage with its specific antigen. During T cell receptor signaling, the binding of PDL-1 with PD-1 transmits an inhibitory signals to IL-2 production and T cell proliferation. This inhibitory co-stimulation plays an important role in body's immune suppressive functions, such as self-tolerance, suppression of immune-rejection during pregnancy and allograft etc. Upregulation of PD-L1 was found to be associated with many cancer types and is believed to contribute to the immune evasion by cancer. For example, increased PDL-1 expression has been shown to be related to tumor aggressiveness and higher mortality in patients with renal cell carcinoma, and related to significantly poorer prognosis and lower intraepithelial CD8+ T-lymphocyte count in patients with ovarian cancer. Antibodies that block the PDL-1 /PD-1 pathway have been extensively studied in clinical trials as immunotherapies for cancer. Among them, Nivolumab and Pembrolizumab have been approved by FDA for treatment of melanoma and non-small cell lung cancer.

Application: The antibody reacts with PDL-1 in Indirect ELISA.
