**Research Area:**  $\alpha$ 1-antichymotrypsin deficiency disorder. Alzheimer’s disease

**Background:**  $\alpha$ 1-antichymotrypsin ( $\alpha$ 1-ACT) presents in plasma at an average concentration of 0.45mg/mL. It is a protease inhibitor for

chymotrypsin-like serine proteinases, such as cathepsin G in neutrophils and chymases in mast cells. The complex formed by  $\alpha$ 1-antichymotrypsin and prostate specific antigen ( $\alpha$ 1-ACT-PSA) has been used as a biomarker for prostate cancer.  $\alpha$ 1-ACT is produced in liver and is increased during acute phase reaction. Deficiency of this protein can cause liver disease and chronic obstructive pulmonary disease.

$\alpha$ 1-ACT is also found in neurofibrillary tangles and senile plaques in the brain lesions of Alzheimer’s disease.

**Applications: Western Blot**

Detect  $\alpha$ 1- ACT using antibody B2B3 at 1:5000 (0.2 $\mu$ g/mL) dilution.

Lane 1 and 2:  $\alpha$ 1-ACT loaded at 20 ng/well
